

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -11-

REMARKS

Claims 22-32 and 34-43 are pending in the present application. Applicants respectfully request reconsideration of the present claims in view of the following remarks.

I. Formal Matters:

Restriction and Election of Species Requirement

As noted in Applicants' January 22, 2010 Amendment and Response, if independent claim 22 is found to be allowable, Applicants request the opportunity to add a claim identical to canceled claim 1 as instructed in MPEP §1893.03(d). In addition, as noted in Applicants' January 22, 2010 Amendment and Response, Applicants respectfully submits that if independent claim 22 is found to be allowable, Applicants request the opportunity to add a claim identical to canceled claim 33 given that the non-elected species recited in canceled claim 33 depend from independent claim 22.

Objection To Specification

Applicants note that the objection to the original specification has been withdrawn as discussed in the June 29, 2010 Advisory Action.

Rejection of Previously presented Claims 22-32 and 35-42 – Non-Statutory Obviousness-Type Double-Patenting In View of Claims 23-24 of U.S. Patent No. 7,199,185 (Heming)

Applicants note that the rejection of previously presented claims 22-32 and 35-42 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 23-24 of U.S. Patent No. 7,199,185 issued to Heming et al. (hereinafter, "Heming") has been withdrawn as discussed in the June 29, 2010 Advisory Action.

Request for Telephone Interview

Applicants request a telephone interview prior to the next office action in order to further discuss the claims and the Examiner's reasoning for the present rejections. Applicants request that Examiner Kaucher contact Applicants' representative at the telephone number provided below.

Serial No. 10/537,467

Page -12-

II. Prior Art Rejections:

Rejection of Previously Presented Claims 22-32 and 34-42 Under 35 U.S.C. §102(e) In View Heming

Previously presented claims 22-32 and 35-42 stand rejected under 35 U.S.C. §102(e) as being anticipated by Heming. This rejection is respectfully traversed for at least the reasons provided in Applicants' January 22, 2010 Amendment and Response, the reasons provided in Applicants' June 15, 2010 Amendment and Response, and the reasons provided below.

As noted in Applicants' January 22, 2010 Amendment and Response and Applicants' June 15, 2010 Amendment and Response, the disclosure of Heming fails to disclose at least the following claim features recited in Applicants' independent claims 22 and 40:

(1) a particulate suspension comprising (a) a liquid phase, and (b) a solid substantially insoluble in the liquid phase and suspended therein via (c) a stabilizing reaction product comprising the reaction product of (i) a polymeric stabiliser having a hydrophilic moiety and a hydrophobic moiety and comprising a plurality of vinylic monomers, not being exclusively of vinylic esters or of their hydrolysed products, at least some of which contain functional groups capable of undergoing cross-linking nucleophilic or condensation reactions, and (ii) one or more substances contained in the liquid phase capable of undergoing a cross-linking reaction with the functional groups (claim 22);

(2) a particulate suspension comprising (a) a liquid phase, and (b) a solid substantially insoluble in the liquid phase and suspended therein via (c) a suspension-stabilizing reaction product as described above, wherein the ratio by weight of the polymeric stabiliser prior to cross-linking to the suspended solid is less than 1 part of polymeric stabiliser per 5 parts of suspended solid by weight (claim 22);

(3) a particulate suspension comprising (a) a liquid phase; (b) a reaction product of (i) a polymeric stabiliser having a hydrophilic moiety and a hydrophobic moiety and comprising a plurality of vinylic monomers, not being exclusively of vinylic esters or of their hydrolysed products, at least some of which contain functional groups capable of undergoing cross-linking nucleophilic or condensation reactions, and (ii) one or more substances contained in the liquid phase capable of undergoing a cross-linking reaction with said functional groups; and (c) an agrochemical solid that is substantially insoluble in the liquid phase and suspended within the

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -13-

liquid phase via the reaction product (claim 40); and

(4) a particulate suspension comprising (a) a liquid phase; (b) the above-described reaction product; and (c) an agrochemical solid, wherein the ratio by weight of the polymeric stabiliser prior to cross-linking to the suspended agrochemical solid is less than 1 part of polymeric stabiliser per 5 parts of suspended agrochemical solid by weight (claim 40).

Applicants note that the March 15, 2010 final Office Action and the July 29, 2010 Advisory Action do not point to any specific locations within the disclosure of Heming that conclusively discloses the above-noted claim features. For example, where does Heming disclose (i) an insoluble solid or an agrochemical solid suspended in (ii) a liquid phase via (iii) a stabilizing reaction product as recited in Applicants' independent claims 22 and 40? In addition, where does Heming disclose Applicants' claimed ratio of (1) stabilizing reaction product to (2) insoluble solid or agrochemical solid as recited in Applicants' independent claims 22 and 40?

The July 29, 2010 Advisory Action suggests that Example 10 of Heming anticipates Applicants' independent claims 22 and 40. However, Example 10 of Heming does not disclose (1) one or more substances contained in the liquid phase capable of undergoing a cross-linking reaction with the functional groups, or (2) a ratio by weight of (a) the polymeric stabiliser prior to cross-linking to (b) the suspended solid of less than 1 part of polymeric stabiliser per 5 parts of suspended solid by weight.

Applicants maintain the position that the disclosure of Heming fails to disclose the above-noted features recited in Applicants' independent claims 22 and 40. As requested above, Applicants would like to discuss the current rejections during a telephone interview in the upcoming weeks.¹

As noted in Applicants' January 22, 2010 Amendment and Response, since the disclosure of Heming fails to disclose each and every claim feature recited in Applicants' independent claims 22 and 40, the disclosure of Heming cannot anticipate independent claims 22 and 40. Since claims 23-32, 34-39 and 41-42 depend from independent claims 22 and 40, and recite additional claim features, the disclosure of Heming cannot anticipate dependent claims 23-

¹ Applicants also note that the March 15, 2010 final Office Action makes the following statement in each of paragraphs 8 and 11: "As to amended claim 34, example 4 discloses a polymer where c is about 0.4." It is not clear to Applicants what this is referring to given that the same statement is used in (1) the 102(e) rejection based on Heming, and (2) the 103(a) rejection based on Fryd (discussed below).

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -14-

32, 34-39 and 41-42. Accordingly, withdrawal of this rejection is respectfully requested.

Rejection of Previously Presented Claims 22-32, 34 and 39-42 Under 35 U.S.C. §103(a)
In View Of U.S. Patent No. 6,262,152 (Fryd)

Previously presented claims 22-32, 34 and 39-42 stand rejected under 35 U.S.C. §103(a) as being unpatentable in view of U.S. Patent No. 6,262,152 issued to Fryd et al. (hereinafter, “Fryd”). This rejection is respectfully traversed for at least the reasons provided in Applicants’ January 22, 2010 Amendment and Response, the reasons provided in Applicants’ June 15, 2010 Amendment and Response, and the reasons provided below.

As discussed in Applicants’ January 22, 2010 Amendment and Response and Applicants’ June 15, 2010 Amendment and Response, the “Background” section of Applicants’ original specification describes in great detail the differences between the compositions of Fryd and Applicants’ claimed invention. See, for example, Applicants’ original specification, from page 1, line 3 to page 2, line 14, and from page 3, line 29 to page 4, line 32. One key difference between the compositions of Fryd and Applicants’ claimed particulate suspensions is Applicants’ claimed ratio by weight of “(a) the polymeric stabiliser prior to cross-linking to (b) the suspended solid” with Applicants’ claimed ratio being less than 1 part of polymeric stabiliser per 5 parts of suspended solid by weight. The teaching of Fryd fails to disclose, teach or suggest such a weight ratio for the disclosed polymer dispersant and solid in the compositions of Fryd.

As further discussed in Applicants’ January 22, 2010 Amendment and Response, the only teaching in Fryd regarding the ratio of polymer dispersant to solid is in the examples, wherein Fryd discloses a ratio of 10 parts of polymer dispersant to 15 parts of solid by weight in the following examples: Example 1, column 9, lines 2-3; Example 2, column 10, lines 35-36; Example 3, column 12, lines 7-8; Example 4, column 13, lines 30-31; Example 5, column 14, lines 53-54; and Example 6, column 16, lines 12-13. Fryd discloses a ratio of 1 part of polymer dispersant to 2.5 parts of solid by weight in Example 7, column 16, lines 35-36.

Given the above-noted teaching of Fryd regarding the weight ratio of polymer dispersant to solid, Applicants respectfully submit that the teaching of Fryd actually teaches away from Applicants’ claimed ratio of less than 1 part of polymeric stabiliser per 5 parts of suspended solid by weight. The teaching of Fryd appears to suggest to one skilled in the art the need to utilize a weight ratio of polymer dispersant to solid material of at least 1 part polymer dispersant

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -15-

to 2.5 parts solid material.

In response to Applicants' January 22, 2010 Amendment and Response, the March 15, 2010 final Office Action states the following in paragraph 23 on page 7:

The examiner acknowledges that the prior art is silent to the specific ratio, however, as stated in the previous office action, Fryd teaches the amount of particle (solid) "is not critical to the invention and can be as desired for the end use application" (3:28-35). Furthermore, Fryd teaches that the polymeric dispersant (polymer) is used to control the dispersibility of the solid (3:36-45). Thus, it is clear that the polymer and solid are result effective variables, and "discovery of an optimum value of a result effective variable in a known process is ordinarily within the skill in the art." See *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). Also see MPEP 2144.05.

Applicants respectfully submit that even though Fryd discloses that the amount of solid material is not critical to the invention, this does not, in any way, suggest to one skilled in the art to utilize any particular weight ratio of polymer dispersant to solid material, and especially Applicants' claimed ratio of less than 1 part of polymeric stabiliser per 5 parts of suspended solid. Fryd is simply stating that, in some applications, such as ink jet inks, a lower concentration of solid particulate material (and presumably a lower concentration of polymer dispersant) may be present in a given dispersion compared to, for example, a higher concentration of solid particulate material (and presumably a higher concentration of polymer dispersant) as found in paint compositions. Further, Applicants respectfully submit that a logical implication of the above-noted text from the teaching of Fryd is that when less solid material is used in a given dispersion (e.g., an ink jet ink), less polymeric dispersant will be needed to disperse the solid material. Conversely, when more solid material is used in a given dispersion (e.g., a paint composition), more polymeric dispersant will be needed to disperse the solid material.

What the above-noted portion of Fryd (i.e., column 3, lines 28-35) does not disclose, teach or suggest to one skilled in the art is a need or desire to increase the solid content relative to the amount of polymeric dispersant for any of Fryd's disclosed dispersions, especially in view of the specific teaching of Fryd's examples showing at least 1 part polymer dispersant to 2.5 parts solid material, and in most cases, 1 part polymer dispersant to 1.5 parts solid material.

As discussed above, the teaching of Fryd suggests to one skilled in the art to

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -16-

utilize a weight ratio of polymer dispersant to solid material of at least 1 part polymer dispersant to 2.5 parts solid material, and in most cases, 1 part polymer dispersant to 1.5 parts solid material. The teaching of Fryd actually teaches away from Applicants' claimed weight ratio of less than 1 part of polymeric stabiliser per 5 parts of suspended solid as recited in each of Applicants' claims.

For at least the reasons given above, Applicants respectfully submit that the teaching of Fryd fails to make obvious Applicants' claimed invention as recited in independent claims 22 and 40. Since claims 23-32, 34, 39 and 41-42 depend from independent claims 22 and 40 and recite additional claim features, the teaching of Fryd also fails to make obvious Applicants' claimed invention as recited in claims 23-32, 34, 39 and 41-42. Accordingly, withdrawal of this rejection is respectfully requested.

Rejection of Previously Presented Claims 27 and 35-38 Under 35 U.S.C. §103(a) In View Of Fryd In Combination With Jankova

Previously presented claims 27 and 35-38 were rejected under 35 U.S.C. §103(a) as being unpatentable in view of Fryd and further in view of Jankova et al., Macromolecules, 1998, 31, 538-541 (hereinafter, "Jankova"). This rejection is respectfully traversed for at least the reasons provided in Applicants' January 22, 2010 Amendment and Response, the reasons provided in Applicants' June 15, 2010 Amendment and Response, and the reasons provided below.

As discussed in Applicants' January 22, 2010 Amendment and Response, Applicants respectfully submit that even if the proposed combination of the teaching of Fryd with the teaching of Jankova is deemed proper, the proposed combination of the teaching of Fryd with the teaching of Jankova fails to teach or suggest Applicants' claimed ratio of less than 1 part of polymeric stabiliser per 5 parts of suspended solid by weight as recited in independent claim 22.

For at least the reasons given in Applicants' January 22, 2010 Amendment and Response and above, the proposed combination of the teaching of Fryd with the teaching of Jankova fails to make obvious Applicants' claimed invention as recited in independent claim 22. Since claims 27 and 35-38 depend from independent claim 22 and recite additional claim features, the proposed combination of the teaching of Fryd with the teaching of Jankova also fails to make obvious Applicants' claimed invention as recited in claims 27 and 35-38. Accordingly,

REQUEST FOR CONTINUED EXAMINATION UNDER 37 CFR § 1.114

Serial No. 10/537,467

Page -17-

withdrawal of this rejection is respectfully requested.

III. New Claim 43:

New claim 43 depends from independent claim 1 and recites additional claim features. Support for new claim 43 may be found in at least the following locations of Applicants' original specification: page 22, lines 8-11; page 23, lines 4-7; and page 26, lines 4-6.

For reasons similar to those provided above, Applicants submit that new claim 43 is allowable over the art. Accordingly, Applicants respectfully request allowance of this claim.

IV. Conclusion:

Applicants submit that claims 22-32 and 34-42 define patentable subject matter. Accordingly, Applicants respectfully request allowance of these claims.

Should Examiner Kaucher believe that further action is necessary to place the application in better condition for allowance, Examiner Kaucher is respectfully requested to contact Applicants' representative at the telephone number listed below.

No additional fees are believed due; however, the Commissioner is hereby authorized to charge any deficiency, or credit any overpayment, to Deposit Account No. 503025.

Respectfully submitted,
